For: Cyberinfiniti Ltd

BUSINESS CONTINUITY & DISASTER RECOVERY POLICY SUMMARY

1. Purpose

This policy defines a governance framework to ensure that critical business operations remain available during disruptions and that ICT systems are resilient, recoverable, and secure.

It ensures:

- Continuity of essential cybersecurity services
- Protection and recoverability of critical data
- Defined and achievable recovery objectives (RTO & RPO)
- Secure and tested backup mechanisms
- Compliance with regulatory and contractual requirements
- Executive involvement in crisis decision-making

2. Scope

This policy applies to all critical operational and technical environments, including:

- SOC operations and monitoring systems
- Incident response and threat intelligence platforms
- Cloud infrastructure environments (Azure, AWS)
- Client-facing portals and reporting systems
- Cybersecurity training platforms
- Internal IT systems supporting operations

It also covers disruption scenarios such as cyber incidents, infrastructure failures, ransomware attacks, cloud region outages, extended power loss, and telecommunications disruptions.

3. Policy Statement

CyberInfiniti Ltd adopts a proactive, risk-based approach to operational resilience. The organization shall:

- Conduct annual Business Impact Analysis (BIA)
- Define Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO)
- Maintain encrypted and geographically separated backups
- Implement documented Disaster Recovery procedures
- Test business continuity and recovery capabilities annually
- Escalate major incidents to executive leadership
- Continuously improve resilience and recovery capabilities

4. Business Impact Analysis (BIA)

A formal BIA is conducted annually to identify critical business functions, determine acceptable downtime thresholds, and assess operational, financial, and reputational impacts.

Critical functions include:

- SOC Monitoring (RTO: 4 hours, RPO: 15 minutes)
- Incident Response Systems (RTO: 6 hours, RPO: 30 minutes)
- Client Reporting Platforms (RTO: 12 hours, RPO: 1 hour)
- Training Platforms and internal systems (lower priority tiers)

These outputs guide recovery prioritization and resource allocation.

5. ICT Readiness & Resilience

Aligned with **ISO/IEC 27002:2022 controls 5.29 and 5.30**, CyberInfiniti ensures ICT readiness through:

- Multi-zone cloud infrastructure deployment
- Redundant internet connectivity for SOC operations
- High-availability security and monitoring architecture
- Secondary communication channels for crisis situations
- Cloud-based Disaster Recovery environments
- Infrastructure-as-Code (IaC) for rapid system restoration

This ensures the organization can maintain or quickly restore operations during disruptions.

6. Backup & Recovery Management

In alignment with **ISO/IEC 27002:2022 control 8.13**, CyberInfiniti implements secure backup practices:

- Daily automated backups and weekly full backups
- Encryption of all backup data
- Storage in geographically separate cloud regions
- Use of immutable backups where supported

Backup reliability is validated through:

- Biannual restoration testing
- Random recovery verification exercises
- Documented evidence of successful recovery

7. Disaster Recovery & Crisis Management

In the event of a disruption:

- Incidents are escalated to the Incident Response Team
- Executive leadership is notified promptly
- The CISO and COO authorize DR activation
- Systems are restored based on business priority
- Clients and stakeholders are informed where required
- Post-incident reviews are conducted to improve resilience

A Crisis Management Team is activated for major incidents, ensuring coordinated response and governance oversight.

8. Testing & Continuous Improvement

CyberInfiniti conducts regular testing to validate resilience capabilities, including:

- Annual BC/DR simulation exercises
- Tabletop and scenario-based drills
- Failover and backup restoration testing
- SOC operational continuity exercises

Performance metrics such as recovery time, backup success rate, and response effectiveness are tracked and reported to executive management.

Lessons learned from incidents, audits, and tests are integrated into continuous improvement initiatives.

9. Regulatory & Contractual Alignment

This policy supports compliance with:

- **Nigeria Data Protection Act 2023** – ensuring availability and protection of personal data
- Client contractual SLAs – maintaining uptime and recovery commitments
- ISO/IEC 27001 certification readiness – supporting Annex A controls
- Industry expectations for cybersecurity service providers

10. Roles & Responsibilities

Key responsibilities include:

- **Managing Director (MD):** Executive oversight
- **Chief Information Security Officer (CISO):** Policy ownership and DR activation authority
- **Chief Operating Officer (COO):** Operational continuity

- **SOC Manager:** SOC resilience execution
- **Cloud Engineering Lead:** Infrastructure recovery
- **IT Manager:** Backup and restoration processes
- **Data Protection Officer (DPO):** Regulatory compliance and breach notification
- **All Staff:** Compliance with BC/DR procedures

11. Monitoring, Compliance & Review

The effectiveness of this policy is monitored through:

- Quarterly resilience reporting to executive leadership
- Annual BC/DR audits
- KPI tracking (RTO performance, backup success, testing completion)

Exceptions must be risk-assessed, formally approved, and time-bound.

The policy is reviewed annually or following major incidents, regulatory changes, or audit findings to ensure ongoing relevance and effectiveness.

12. Executive Statement

CyberInfiniti Ltd recognizes that operational resilience is essential to maintaining client trust, regulatory compliance, and cybersecurity effectiveness. Through structured BC/DR governance aligned with **ISO/IEC 27002:2022**, the organization is committed to ensuring secure, resilient, and continuously available services in the face of evolving disruptions.

1. ORGANISATIONAL CONTEXT

CyberInfiniti Ltd is a cybersecurity startup providing:

- Managed Security Operations Centre (SOC) services
- Incident response & digital forensics
- Cloud security advisory
- Governance, Risk & Compliance services
- Cybersecurity training platforms

As a cybersecurity provider entrusted with monitoring and protecting client systems, CyberInfiniti must remain operational during:

- Cyber attacks (including ransomware)
- Cloud infrastructure outages
- Power failures
- National disruptions
- Political instability
- Natural disasters
- Insider sabotage
- Supply chain failures

Any prolonged outage of SOC services could:

- Expose client systems to active threats

- Breach client SLAs
- Cause regulatory non-compliance
- Result in reputational damage

This policy establishes the governance framework to ensure operational resilience and ICT readiness.

---

2. PURPOSE

This policy ensures that:

- Critical business operations continue during disruptions.
- ICT systems are resilient and recoverable.
- Data backups are secure and tested.
- Recovery objectives are defined and achievable.
- Regulatory and contractual requirements are met.
- Executive leadership is involved in crisis governance.

---

3. SCOPE

This policy applies to:

Operational Areas

- SOC operations
- Client monitoring systems

- Threat intelligence platforms
- Cloud infrastructure (Azure, AWS)
- Client reporting portals
- Training academy platform
- Internal IT systems

Disruption Scenarios

- Cyber incidents
- Infrastructure failure
- Data center outage
- Cloud region failure
- Ransomware attack
- Extended power outage
- Telecommunications disruption

---

4. ISO/IEC 27002:2022 ALIGNMENT

ISO Control	Domain	Alignment Description
5.29	Organizational Controls	Ensures information security during disruption
5.30	Organizational Controls	Ensures ICT readiness to support business continuity
8.13	Technological Controls	Ensures secure information backup practices

---

5. POLICY STATEMENT

CyberInfiniti Ltd shall:

1. Conduct Business Impact Analysis (BIA).
2. Define Recovery Time Objectives (RTO).
3. Define Recovery Point Objectives (RPO).
4. Maintain encrypted, geographically separated backups.
5. Maintain documented Disaster Recovery procedures.
6. Test BC/DR capabilities annually.
7. Escalate major disruptions to executive leadership.
8. Continually improve resilience posture.

---

6. BUSINESS IMPACT ANALYSIS (BIA)

A formal BIA shall be conducted annually to:

- Identify critical business functions
- Determine maximum tolerable downtime
- Assess financial, operational, and reputational impact
- Define recovery priorities

6.1 Critical Functions Identified

Function	Impact Level	RTO	RPO
SOC Monitoring	Critical	4 Hours	15 Minutes
Incident Response Systems	Critical	6 Hours	30 Minutes
Client Reporting Portal	High	12 Hours	1 Hour
Training Platform	Medium	48 Hours	24 Hours
Internal Email	High	8 Hours	1 Hour

---

7. ICT READINESS FOR BUSINESS CONTINUITY

(ISO 5.30 Alignment)

7.1 Redundancy Requirements

- Cloud-hosted infrastructure across multiple availability zones.
- Redundant internet service providers for SOC.
- Secondary communication channels.
- High-availability firewall and monitoring architecture.

7.2 Disaster Recovery Site

CyberInfiniti shall maintain:

- Cloud-based DR environment
- Infrastructure-as-Code deployment scripts
- Secure configuration baselines
- Documented recovery procedures

---

8. INFORMATION BACKUP REQUIREMENTS

(ISO 8.13 Alignment)

8.1 Backup Standards

- Daily automated backups
- Weekly full backups
- Encrypted backup storage
- Off-site storage in separate cloud region
- Immutable backup configurations (where supported)

8.2 Backup Testing

- Backup restoration testing every 6 months.
- Random restore verification exercises.

- Documented evidence of restore success.

---

9. DISASTER RECOVERY PROCEDURES

In case of disruption:

1. The incident escalated to the Incident Response Team.
2. Executive Management notified.
3. DR activation decision by CISO & COO.
4. Systems restored in priority order.
5. Communication sent to clients (if applicable).
6. Post-incident review conducted.

---

10. CRISIS GOVERNANCE & ESCALATION

For major incidents:

- Crisis Management Team activated.
- CEO & MD briefed within 1 hour.
- Regulatory notification assessed (NDPA requirement if personal data affected).
- Clients notified per contractual SLAs.

---

11. TESTING & EXERCISES

CyberInfiniti shall conduct:

- Annual BC/DR simulation exercise.
- Tabletop exercises.
- Failover testing.
- Backup restoration testing.
- SOC continuity drills.

Testing results reported to executive leadership.

---

12. REGULATORY & CONTRACTUAL ALIGNMENT

This policy supports compliance with:

Nigeria Data Protection Act (NDPA 2023)

- Ensures availability of personal data.
- Supports breach response obligations.

Client SLAs

- Demonstrates resilience and commitment.
- Meets uptime guarantees.

Financial Sector Expectations

- Supports operational resilience for regulated clients.
- Aligns with global cybersecurity service expectations.

---

13. ROLES & RESPONSIBILITIES

Role	Responsibility
MD	Executive oversight
CISO	Policy ownership & activation authority
COO	Operational continuity
SOC Manager	SOC resilience execution
Cloud Engineering Lead	Infrastructure recovery
IT Manager	Backup & restore operations
DPO	Regulatory notification assessment
All Staff	Adhere to BC/DR procedures

---

14. MONITORING & REPORTING

- Quarterly resilience report to Executive Team.
- Annual BC/DR audit review.
- KPI tracking:
    - Recovery time performance
    - Backup success rate

    - Testing completion rate
    - Incident response effectiveness

---

15. EXCEPTIONS

Any deviation must:

- Be documented.
- Include risk assessment.
- Be approved by CISO and CEO.
- Have defined expiration periods.

---

16. CONTINUAL IMPROVEMENT

This policy shall be reviewed:

- Annually
- After major disruption
- After regulatory change
- After audit findings

Lessons learned shall feed into risk management and control enhancement.

---

17. POLICY ACKNOWLEDGEMENT

All relevant personnel must:

- Review this policy.
- Complete BC/DR awareness training.
- Acknowledge compliance annually.

Records maintained by HR & Compliance.

EXECUTIVE STATEMENT

CyberInfiniti Ltd recognizes that operational resilience is foundational to maintaining client trust, regulatory compliance, and cybersecurity effectiveness.

Through structured Business Continuity and Disaster Recovery governance aligned with ISO/IEC 27002:2022 controls 5.29, 5.30, and 8.13, the organization commits to maintaining secure and resilient operations in the face of disruption.
